DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-5 and 7-9 rejected under 35 U.S.C. 102(b) as being clearly anticipated by Jacobson (USP 5,264,736). Jacobson discloses a driver for a switch that precharges the inductor before switching on the second switch. See figures 2 .

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Jacobson (USP 5,264,736) in view of Zhang (USP 6,441,673). Jacobson discloses the claimed

invention except for having a bridge circuit for the resonant gate driver. Zhang discloses that it is known in the art to provide a bridge circuit for the resonant gate driver. It would have been obvious to one having ordinary skill in the art at the time of the invention was made to provide the bridge circuit for the resonant gate driver of Zhang with the high frequency resonant gate driver for a power MOSFET of Jacobson, in order to provide a resonant gate driver circuit suitable for driving power switches in high frequency applications that recovers gate drive energy stored in the gate capacitance of the power switches, resulting in substantially lossless operation.
